- NOTE!** nominal driver current will be divided by 4 (number of chips in an array)

To drive the LED we recommend the following basic circuit connection:

We recommend using **Quasi Continuous Wave (qCW) mode** with a duty cycle 50% or 25% to obtain maximum average optical power and short **Pulse modes** to obtain maximum peak power. Hard CW (continuous wave) mode is NOT recommended.

#### Quasi Continuous Wave (qCW) mode

#### Pulse mode

#### IMPORTANT CAUTIONS:

- please check your connection circuit before turning on the LED array;
- please mind the LED array polarity: anode is marked with a RED dot; REVERSE voltage applying is FORBIDDEN;
- please do not connect the LED array to the multimeter;
- please control the CURRENT applied to the LED array in order NOT to EXCEED the maximum allowable values.
